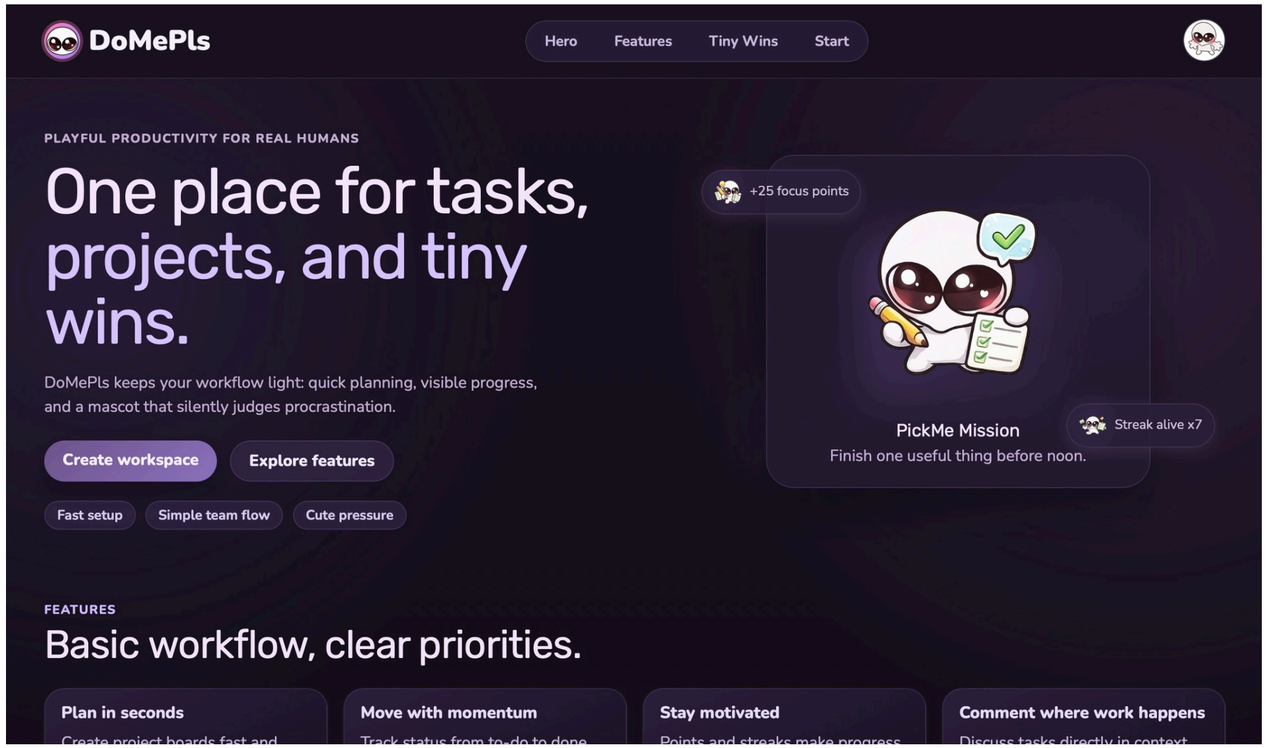
Task Management System

DoMePls is a web application for managing personal and team tasks.
Main idea:

- create projects and tasks;
- assign tasks to team members;
- track progress, deadlines, and team activity;
- motivate users with points, streaks, and achievements.

The goal is to make task management more transparent, organized, and engaging.

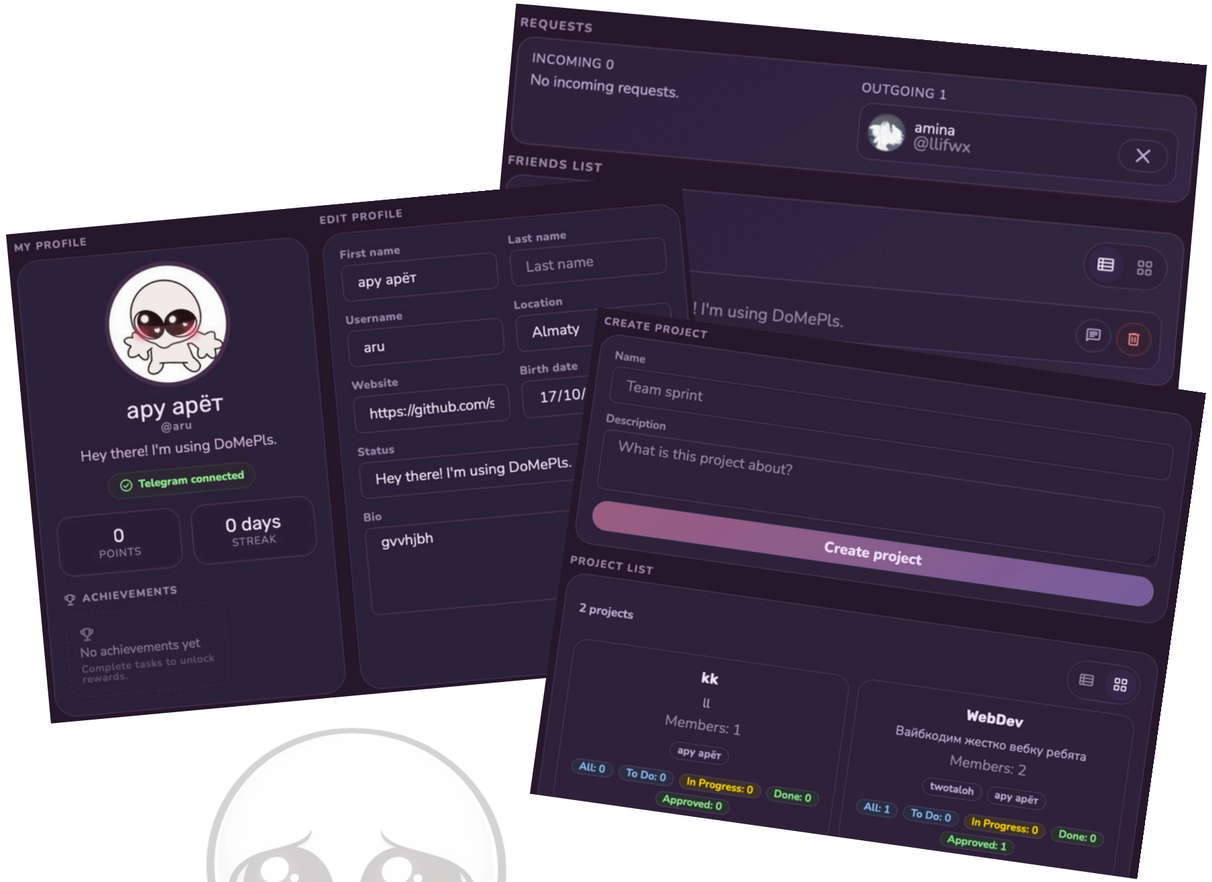


Core Features

The project includes the main features of a modern task manager:

- registration, login, and JWT authentication;
- user profile management;
- project creation and member invitations;
- personal and project tasks;
- task statuses: To Do, In Progress, Done, Approved, Cancelled;
- task comments;
- friends, friend requests, and user profiles;
- direct and project chats;
- notifications, including Telegram integration.

Tasks can also be categorized by difficulty and urgency.



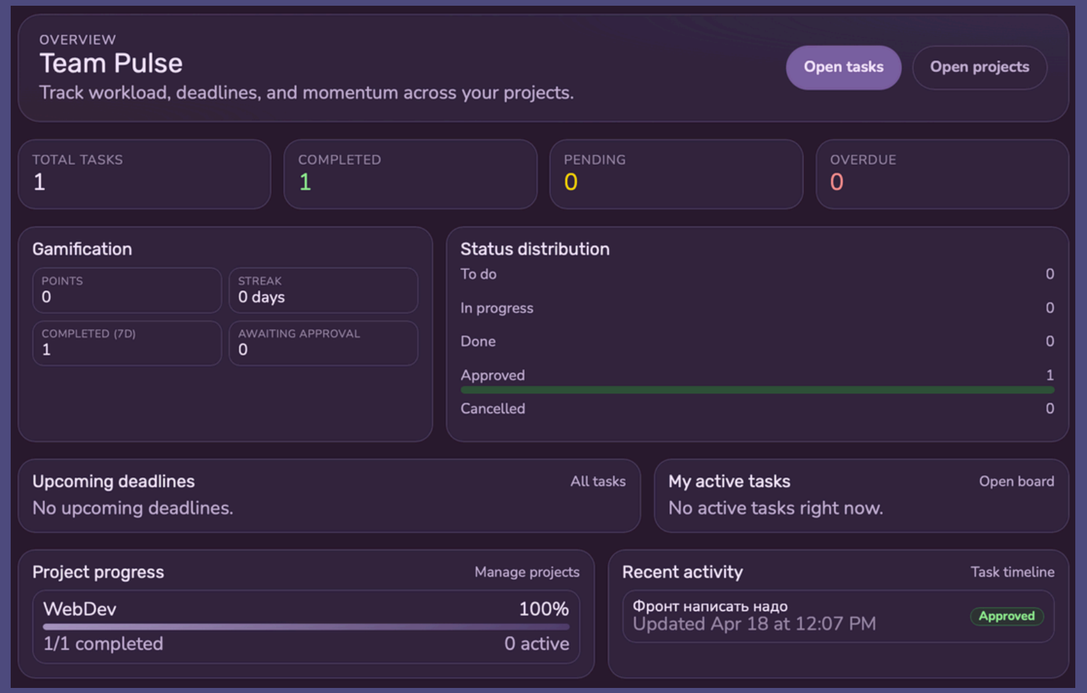
please give us full points

Gamification and Analytics

DoMePls motivates users to complete tasks consistently.

The project includes:

- points for completed and approved tasks;
- streak tracking for regular activity;
- achievements based on user progress;
- dashboard with overall statistics;
- total, completed, pending, and overdue task counters;
- upcoming deadlines, active tasks, and project progress.



Technologies & Architecture

The project is built as a full-stack application.

Frontend:

- Angular;
- TypeScript;
- Angular Router;
- components for dashboard, projects, tasks, chats, friends, and profile.

Backend:

- Django;
- Django REST Framework;
- JWT authentication;
- Django Channels for real-time chats and notifications;
- SQLite for development, PostgreSQL-ready architecture.

Architecture:

- the frontend communicates with the backend through a REST API;
- the backend manages users, projects, tasks, chats, and notifications;
- Telegram is used for external notifications;
- the project is prepared for deployment on Render.
